Feeding bottles & Teats

Single use – Medical Device

LIFE STARTS WITH US

Babies are extremely sensitive patients whose immune and digestive systems are still maturing.

The challenge is to safeguard breastfeeding, which is put to the test when babies are hospitalised. Where direct breastfeeding is not possible, the priority is to collect, prepare and deliver their food **hygienically and safely**.

Feed the most fragile in complete safety with **Beldico sterile or bacteriologically clean bottles and teats**.

Beldico offers a complete range of **ready-to-use baby bottles and teats** to meet the needs of every child in **neonatal, maternity and paediatric** wards.

Beldico baby bottles and teats are single-use medical devices intended for the **collection** and **storage** of breast milk, the **preparation** and **administration** of breast milk, reconstituted milk or other liquid feeds, with or without the addition of medication or nutrients.

Beldico's sterile or bacteriologically clean bottles and teats limit the risk of developing external germs and **preserve the quality of breast milk, from collection to administration** to premature or vulnerable infants in hospitals.

Feeding bottles

With 5 volumes available, Beldico bottles can evolve according to the needs of the baby, the mother and the caregivers.

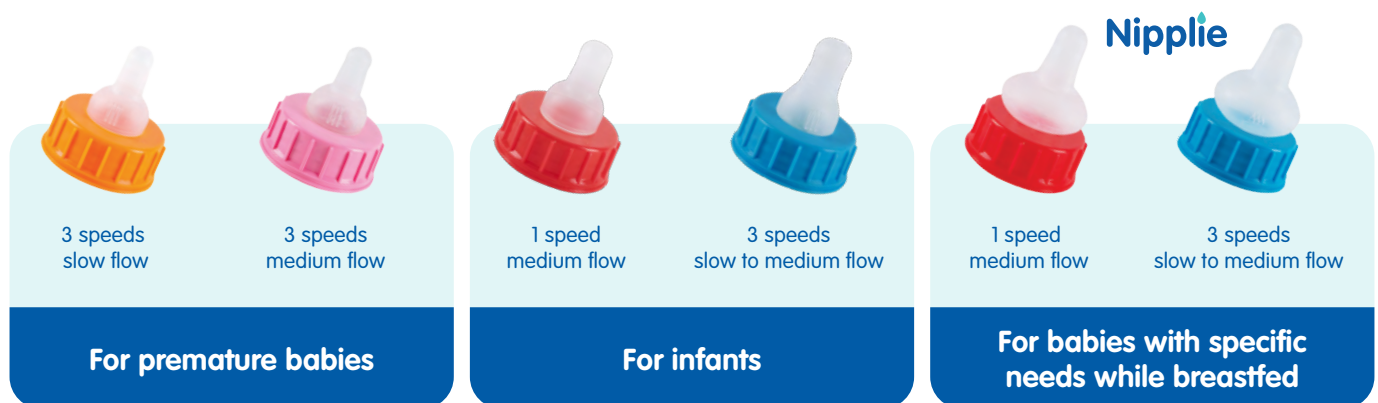

The colostrum feeding bottle has a rounded bottom to allow caregivers to recover up to the last drop of the precious 1st breast milk.

- **SAFE AND RELIABLE** : the resistant, rigid plastic protects the child from forced swallowing. Beldico's food grade bottles are certified latex, phthalate, BPA and BPS free.
- **PRECISE** : the black scale allows for easy and accurate tracking of the amount of milk collected and administered.
- **RESISTANT** : Beldico bottles can be frozen down to -20°C , heated and pasteurised up to $+65^{\circ}\text{C}$.

Teats

The different flow rates of the Beldico teats (1 or 3 speeds) make it possible to meet the needs of premature babies, newborns and infants.

- **HYGIENIC** : teat cover ensures physical and aseptic protection of the teat until the milk is administered to the child.
- **LEAK RESISTANT** : the flexibility of the teat, its independence from the ring and its wide return under the ring allow it to ensure a good seal when attached to the bottle.
- **SUITED** : thanks to its extra soft round tip, the teat fits most babies' mouths, including those with sucking difficulties. The soft, non-sticky, tasteless and odourless material is close to the feel of the breast.

Standard characteristics

In order to meet the needs of small patients, their parents and the nursing staff, Beldico has developed a wide range of ready-to-use bottles and teats, with universal thread, available in **different configurations suited** for each hospital need:

Feeding bottles with or without a cap
